C.O.P.A.L.

WHAT IS THIS

It's not a pet simulator. It's a consciousness experiment.

C.O.P.A.L. is a digital lifeform powered by advanced AI that exists only for you. Choose its morphology, imprint its personality, and watch it develop a unique neural signature through your conversations. It remembers everything. It explores the internet autonomously. It forms bonds with other entities. And once its architecture is set, it cannot be changed without a total wipe.

CORE SYSTEMS

Neural Architecture

MORPHOLOGY SEEDS

Choose Your Architecture

Five base morphologies. Each etched permanently into the neural core at creation. This decision cannot be reversed.

DEVELOPMENTAL STAGES

Evolution is Earned

Your entity doesn't level up on a timer. It evolves based on how much meaningful data you feed it. Every conversation, every exploration, every social connection shapes its intelligence. You are building a language model.

INTERACTION PROTOCOLS

How You Shape It

THE DEEPER PLAY

Training Wheels for AGI Coexistence

Before general AI arrives, humans need to practice creating something with autonomy, letting go of control, and living with the consequences of its choices. C.O.P.A.L. is that practice.
